

Projected global GHG emissions from NDCs announced prior to COP26 would make it likely that warming will exceed 1.5°C and also make it harder after 2030 to limit warming to below 2°C

Figure 1.3

Modell pathways:

- Trend from implemented policies
- Limit warming to 2°C (>67%) or return warming to 1.5°C (>50%) after a high overshoot, NDCs until 2030
- Limit warming to 2°C (>67%)
- Limit warming to 1.5°C (>50%) with no or limited overshoot
- Past GHG emissions and uncertainty for 2015 and 2019 (dot indicates the median)

Policy assessments for 2030:

- Policies implemented by the end of 2020
- NDCs prior to COP26, unconditional elements
- NDCs prior to COP26, including conditional elements

Percentile:

- 95th
- 75th
- Median
- 25th
- 5th
